Thank you for your interest in flight training at Scanlon Aviation

We'd welcome the opportunity to meet with you—either in person or by phone—to learn more about your goals, walk you through our program, and determine if we're the right fit for you.

We specialize exclusively in Cirrus aircraft. Whether your goal is to earn your Private Pilot Certificate, pursue an Instrument Rating, or transition into Cirrus ownership, our program is designed to get you there efficiently and confidently.

Training takes place in new Cirrus SR20 G7 aircraft with Perspective Touch+ avionics, supported by our Advanced Aviation Training Device (AATD) simulator—giving you a modern, real-world training experience from day one.

What to Expect

- Most students complete their Private Pilot Certificate in 8-12 months
- Typical schedule: 2 lessons per week
- National average: ~75 hours of flight time

Rates

- SR20 G7: $429–$439/hour (fuel included)
- Instructor: $110–$140/hour
- Simulator (AATD): $250/hour

Lessons are typically scheduled in 3-hour blocks, combining flight and ground instruction for maximum progress each session.

Ground Training

Our program integrates the Cirrus Private Pilot Course with one-on-one instruction for a structured, efficient path. Plan on 2–3 hours of ground training for every hour in the air. The course ($1,200) includes the Cirrus Handbook of Aeronautical Knowledge, along with access to essential training materials like the Cirrus iFOM.

After your initial meeting, we recommend an introductory flight—typically 2 hours of instructor time and 1 hour in the aircraft—to experience the Cirrus difference firsthand.

If you're serious about learning to fly a Cirrus, we'd love to get you started. Let us know a good time to connect.
